This sequence represents the Cannabis sativa tetrahydrocannabinolic acid (THCA) synthase amino acid sequence. The THCA gene sequence can be used to produce an expression vector containing the gene. Cells can be transformed using the vector, so that they produce a protein with THCA synthase activity. THCA can be used for anaesthesia, pain-killing, intraocular pressure lowering and anti-inflammatory treatment.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New strains of bread-making yeast with low fermentative activity at low temperature - allows production of doughs that can be stored cold for many hours before final baking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Mutant; cold sensitive; yeast; complementation; breadmaking; dough; sugar; leavening agent; brewing; winemaking; truncation.

The FIPV-I spike protein may be used in the production of a vaccine for the prevention and treatment of FIPV-I infection. The spike protein may be produced by transforming a host cell with the spike protein DNA and expressing the sequence such that the spike protein can be isolated.

                                   This is the amino acid sequence of a mutant protein (designated YLR087c) isolated from a cold sensitive strain of Saccharomyces cerevisiae. The gene sequence was isolated from the clone YCp50-10.39 which was able to complement the cold sensitive strain HL13.2.30. This protein is a truncated mutation as compared to the wild type sequence. The wild type apen contains a open reading frame of 884 bases encoding a protein of 2958 amino acids. The mutant gene has an open reading frame of 7488 bases encoding a protein of 2496 amino acids. Yeast strains containing processes, i.e. in processes where the delay between mixing the dough and baking exceeds 6 hr. Particularly they are used to make French-style bread (no added sugar) or breads with sugar content below 58. The strains can also be used in brewing and winemaking as a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This is a protein capable of complementing a mutation showing low temperature sensitivity in fermentation. This is encoded by a novel genomic DNA CSF-1 (cold sensitivity of fermentability). The Saccharomyces cerevisiae YHK 1243 has an inactivated gene encoding this new protein or has the novel DNA sequence contained in its chromosome. This protein can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Saccharomyces cerevisiae; cold sensitivity of fermentability; CSF-1; low temperature sensitivity; yeast; bread; ethanol; fermentation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Protein for complementing low temperature sensitivity in fermentation - can be inactivated in yeast and used for producing

Antibodies specific for ICAM's are potentially useful as therapeutic compounds, for treating e.g. immune-mediated inflammatory conditions (e.g. graft-versus-host disease), asthmatumours or viral infections. Monoclonal antibodies specific for ICAM-R, or their conjugates formed with e.g. toxins or radionoclides are useful for therapeutically targeting or detecting neovascularisation sites. This represents the amino acid sequence of the longest canine ICAM-R
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Humanised antibodies specific for intercellular adhesion molecule polypeptide - useful for therapeutic or diagnostic purposes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to humanised ICR 1.1 and ICR 8.1 antibodies
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 targeted to the human intercellular adhesion molecule polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

This sequence represents a novel barley alpha-glucosidase protein. Recombinant alpha-glucosidase can be used to increase the rate of starch grain hydrolysis when used together with alpha-amylase or can supplement glucoamylase in industrial starch hydrolysis systems. Useful DNA sequence characteristics from this enzyme can be identified which can be used as hybridisation probes for identifying germplasm with high levels of efficient hydrolytic enzymes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     DNA encoding barley alpha-glucosidase protein – useful for producing recombinant protein to increase rate of starch grain hydrolysis when used with alpha amylase
                                                                                                                                                                 Alpha-glucosidase; barley; starch grain hydrolysis; alpha-amylase; glucoamylase; industry; germplasm; hydrolytic enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Arabidopsis thaliana plant morphogenesis regulatory protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Plant, morphogenesis; regulation; short; stem; alteration; inflorescence; extraneous; gene; expression; transformation; increase; control; form; length.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This invention describes a novel method for identifying a compound that modulates phosphorylation of human intercellular adhesion molecule polypeptide (ICAM-R) by protein kinase C isoform. The method comprises: (a) exposing a purified peptide consisting of the cytoplasmic domain of ICAM-R to protein kinase C isoform and labeled adenosine triphosphate in the presence and absence of a test compound; (b) measuring labeled in phosphate transferred to the peptide; and (c) identifying a test compound that affects transfer of the labeled phosphate as a modulator compound. The method is useful for identifying compounds that modulate the phosphorylation of human intercellular adhesion molecule polypeptide which might form the basis for the development of therapeutic and diagnostic agents. This sequence represents a canine ICAM-R protein which is described in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Identifying modulators of protein kinase C phosphorylation of human intercellular adhesion molecule polypeptide .

Polypeptide(s) expressed by truncated genes, esp. spider delta-latroinsectotoxin - also related non toxic precursor polypeptide. isolated from Black Widow spider, useful as insecticide
                                                                                                                          This protein may be expressed recombinantly in E. coli BL21 (DB3) cells transformed with pT7-7 vectors comprising the truncated form of the sequence. The encoded protein is an insect-specific neurotoxin, delta-lactroinsectotoxin, which is useful as an oral or topical insecticide. Expressing the truncated gene allows large-scale production of active toxin in bacteria, eliminating the need mammals and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            widow spider; insecticide; pesticide; delta-latroinsectotoxin;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This protein is an insect-specific neurotoxin, delta-
lactroinsectotoxin, which is useful as an oral or topical
insecticide. This neurotoxin is harmless to mammals and plants.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Black widow spider delta-latroinsectotoxin precursor protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               morphogenesis regulatory protein (MRP), which can be used to yield a plant with, e.g. short stems or altered inflorescence. The MRP acts on a plant at a specific site for a specific period, and can therefore be used to regulate extraneous gene expression in a plant. The MRP's cDNA or genomic DNA can be used to transform a plant to increase its MRP expression, and therefore control the form (particularly stem length) of the plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                - useful to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence represents the protein sequence encoded by the Arabidopsis thaliana (Wassilewskija cultivar) Peronospora parasitica resistance RPP1 Was gene. The Arabidopsis RPP1 locus has at least three functional genes designated RPP1-Was, RPP1 was and RPP1-WsC, that differ in their ability to detect four different P. parasitica isolates. Peronospora parasitica (downy mildew) is a biotrophic comycete, and Arabidopsis RPP1 genes encode polypeptides capable of recognising and activating a defence response in a plant in response to challenge with a P. parasitica activating a defence isolate, or a P. parasitica Avr (avirulence) gene. The three RPP-1 genes encode functional proteins of the Nucleotide Binding (NB)-IRR resistance
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              protein class. Each gene recognises different pathogen aviralence geness or alleles. Together the RPP1 genes comprise a complex resistance locus containing a functionally variable family of resistance genes found on the bottom arm of chromosome 3. The RPP1 nucleotide sequences can be used for identifying, cloning or amplifying RPP1 sequences. Transgenic plants containing the RPP1 sequences have increased resistance to the fungus P. parasitica. The methods are useful for influencing or affecting the degree of resistance of a plant to such a fungus.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peronospora parasitica resistance genes from Arabidopsis thaliana useful in transgenic plants having increased resistance to the fungus
                                                                                                                                                                                                                                                                                                                                   Recognition of Peronospora parasitica 1; RPP1-WSB; downy mildew; blotrophic oomycete; chromosome 3; nucleotide binding-LRR protein;

Gaps
linked asexual gene 2 (CLAG2) protein that facilitates cytoadherence of erythrocytes parasitised with plasmodium spp. to other cells. It is encoded by a gene located on chromosome 2 of a falciparum. It is a member of a family of CLAG proteins (see also Y31945-48). The identification of clag genetic species, and the products encoded by them, enables a range of therapeutic agents to be rationally designed and/or identified that are useful for the prophylaxis and treatment of disease conditions caused or exacerbated by infection with Plasmodium spp., e.g. malaria,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ó;

Peptides 9, 429-431, 1988
A; Title: Cholecystokinin octapeptide purified from brains of Australian marsuplals.
A; Reference number: P00012; MUID:88234141
       N; Alternate names: CCK
C; Species: Dasyurus viverrinus (southeastern quoll)
C; Species: Dasyurus viverrinus (southeastern quoll)
C; Date: 07-Sep-1990 #sequence_revision 07-Sep-1990 #text_change 13-Sep-1996
C; Accession: P00012

A61230
calsequestrin, cardiac and slow skeletal muscle - northern leopard frog (fragment)
N;Alternate names: 58K dihydropyridine-binding protein; aspartactin; calmitine; lamin
C;Species: Rana pipiens (northern leopard frog)
C;Date: 03-May-1994 #sequence_revision 03-May-1994 #text_change 16-Jul-1999
C;Accession: A61230
R;McLeod, A.G.: Shen, A.C.Y.; Campbell, K.P.; Michalak, M.; Jorgensen, A.O.
Circ. Res. 69, 344-359, 1991
A;Fitle: Frog cardiac calsequestrin. Identification, characterization, and subcellula rdium.
A;Reference number: A61230; MUD:91316784
A;Accession: A61230
A;Molecule type: protein
A;Residuas: 1-9 cMCL.
C;Comment: Calsequestrin is a high-capacity and moderate-affinity calcium binding pro
C;Comment: Calsequestrin acts as a calcium buffer, and the release of calcium bound t
C;Comment: The fast skeletal muscle isoform of calsequestrin can be phosphorylated in
C;Superfamily: calsequestrin
C;Keywords: calcium binding; cardiac muscle; glycoprotein; heart; phosphoprotein; ske
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 calliFMRFamide 1 - bluebottle fly (Calliphora vomitoria)
C;Species: Calliphora vomitoria
C;Species: 30-Sep-1993 #sequence_revision 30-Sep-1993 #text_change 17-Mar-1999

"Identification and immunocytochemical localization of proctolin
pericardial organs of the shore crab, Carcinus maenas.";
Peptides 7:67-72(1986).

-!- FUNCTION: STIMULATES CARDIAC OUTPUT AND HINDGUT MOTILITY,
MODULATES VISCERAL AND SKELETAL MUSCLE IN MANY ARTHROPODS.

-!- TISSUE SPECIFICITY: FOUND IN THE LATERAL WHITE NEURONS AND IN
THE CRAB PERICARDIAL ORGANS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ó
